

TITLE : CHARACTERISTICS OF PARTICIPANTS OBTAINED FROM THE DATA VISUALIZATION TOOLS OF THE *BIOBANQUE QUÉBÉCOISE DE LA COVID-19*; A POWERFUL OPEN SCIENCE TOOL TO ADVANCE COVID-19 RESEARCH.

Madeleine Durand, David Bujold, Guillaume Bourque, Karine Tremblay, Emilia Liana Falcone, Alain Piché, Simon Décary, Sze Man Tse, Christel Renoux, Guillaume Bourque, Ma'n Zawati, Daniel Auld, Alexandre Monpetit, David Bujold, Brent Richards, Mylène Bertrand, Solomia Yanishevsky, Doris Ramsay, Pascale Léon, Marc Messier-Peet, Daniel Kaufmann, Vincent Mooser and Simon Rousseau, *for the Biobanque Québécoise de la COVID-19*.

Oral presentation at the CITF conference, Vancouver, Canada, March 8-9th

**COVID-19
IMMUNITY
TASK FORCE**

COI

- I have not conflict of interest to disclose
- BQC 19 is funded by FRQS, PHAC, Ministère de la santé et des services sociaux du Québec, Génome Québec, CITF

OBJECTIVES

- Understand the dynamics underlying participation to BQC 19
- Overview of characteristics of participants
- Familiarize ourselves with type of available content and data
- Discover the Bento data visualization platform

Participants (15 février 2023)

Participants

** Financement 2020-2022*

4 037

Participants 5e vague

** Recrutés entre 26 déc 2021 et 31 mars 2022*

603

Participants

** Financement 2022-23*

BASELINE CHARACTERISTICS

	Inpatients n=2581	Outpatient n=3074
Age (years, mean, SD)	59.85 (21.8)	43.81 (14.81)
Age categories		
≤17	157 (6%)	39 (1%)
18-50	723 (28%)	1708 (56%)
51-64	815 (32%)	618 (20%)
65-79	893 (35%)	205 (7%)
80+	545 (21%)	18 (0.6%)
Female sex (n, %)	1420 (55%)	1790 (58%)
Admission modality (n, %)		
ICU	651 (25.2%)	
Covid status (n, %)		
Positive	1814 (70%)	2943 (96%)
Negative	767 (30%)	131 ((4%)

	inpatients	outpatients
Comorbidities (n, %)	N=2581	N=3074
Hypertension	1318 (51%)	300 (10%)
Asthma	325 (13%)	259 (8%)
Chronic obstructive pulmonary disease	304 (12%)	37 (1%)
Diabetes	763 (30%)	124 (4%)
Stroke	160 (6%)	13 (0.4%)
Heart failure	249 (10%)	6 (0.2%)
Myocardial infarction	170 (6%)	13 (0.4%)
Chronic kidney disease stages ≥ 3	343 (13%)	24 (0.8%)
Clinical frailty scale (n, %)	N=668	N=65
Non-frail (1-4)	505 (76%)	64 (98%)
Mild-to-moderately frail (5-6)	122 (18%)	1 (2%)
Severely frail (7+)	41 (6%)	0 (0%)

VACCINATION STATUS

Vaccination status	
At least 1 dose	3030
At least 2 doses	2682
At least 3 doses	1602
At least 4 doses	215

Etc, etc, etc...

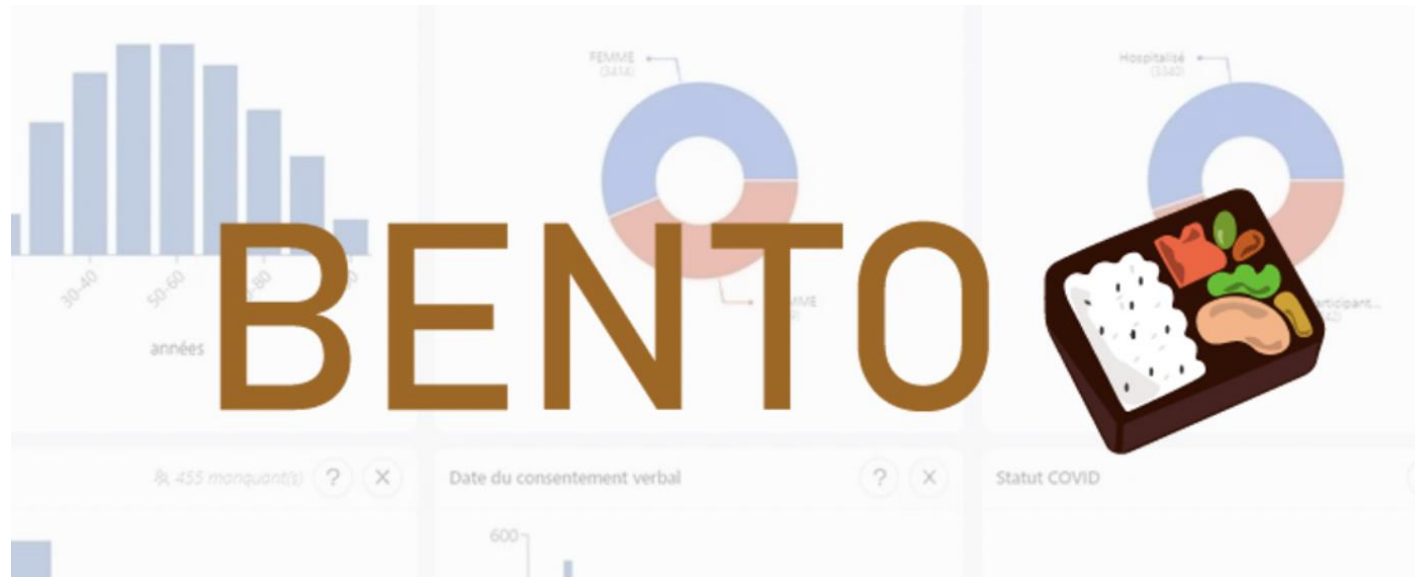

BIOBANK'S CHALLENGES IN CONTENT DESCRIPTION

(AS A BARRIER FOR THEIR USE AND FAIR PRINCIPLES)

- Huge quantities of biosamples and associated data that are difficult to describe
 - Different populations
 - Long timelines
 - Variety of research questions and perspectives
 - Nature of biobank is to have a living inventory (*so what is left in it now?*)
- How can we assist researchers in optimizing biobank's use?

BENTO'S DATA VISUALIZATION PLATFORM

OK... BUT IS THERE WHAT I WOULD NEED IN BQC-19?

<https://en.quebeccovidbiobank.ca/bento>

Google

🔍 bqc19 bento

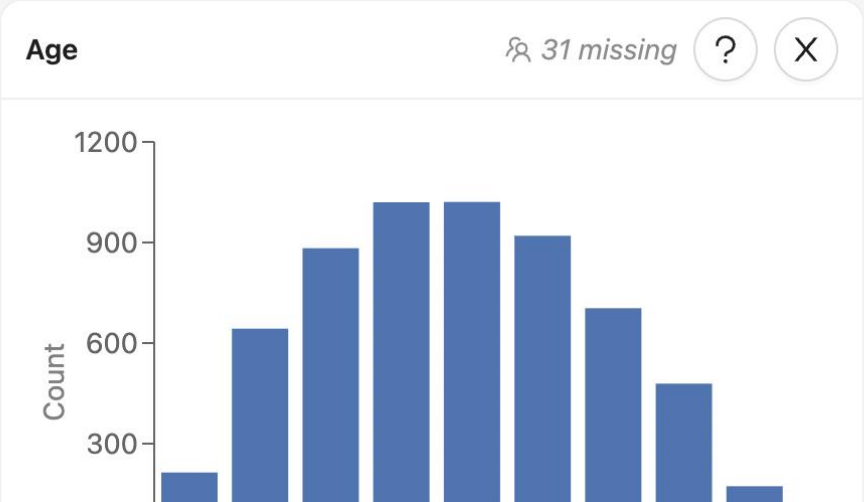

Overview Search Provenance

Individuals: 6088

La plateforme Bento permet à la communauté scientifique d’explorer les données agrégées de la cohorte BQC19. L’objectif est de permettre aux utilisateurs potentiels de la BQC19 de déterminer si les données disponibles dans la biobanque répondent aux besoins de leur projet de recherche avant qu’ils ne préparent une demande d’accès. Les utilisateurs dont les demandes d’accès ont été acceptées pourront bientôt accéder à des informations granulaires grâce à un portail privé sécurisé accessible par mot de passe.

The Bento platform enables the research community to explore the BQC19 cohort aggregate data. It is meant for potential data users to help them determine whether the cohort would be a good match for their research needs, before going through an access application process. Data and sample applicants will soon be allowed to access the granular information in a private, password-protected part of the portal, after obtaining proper access.

FUTURE DEVELOPMENTS – BENTO 2.0

- Secure, password protected portal for users of BQC-19
- Deployment of analysis tools without need to download data
- Visualization tools at the patient level
- Larger quantity of search criteria available (presently limited to 2)
- No small cell rule
- Summary statistics by subgroups
- Allows to “cut” parts of data for subgroups for download

CONCLUSIONS - LESSONS LEARNED

- BQC-19 is one of many COVID biobanks containing wealth of data and biosamples that represent a rich tool for research: diverse populations and prolonged follow-up ideal to study waning and hybrid immunity, long COVID syndromes
- Large and complex datasets are hard to grasp: identification of sub-populations of interest to various researchers is important
- Bento offers a data visualization tool to promote **FAIR** principles (Findability, Accessibility, Interoperability, and Reusability)
